

Tufin Technology Alliance Partner (TAP) Program

Partner Brief

Business Challenge

Tufin Orchestration Suite's policy-centric approach to cybersecurity provides visibility across multi-vendor and multi-platform networks, supports zero-touch change automation to ensure network and application connectivity, and enables organizations to realize a state of both security and business agility. The policy-centric approach enables organizations to make changes in minutes, reduce their attack surface, and achieve continuous compliance. Companies leverage Tufin for achieving greater business continuity, improving agility, and ingraining security policy throughout the networks evolution to include next generation networking platforms.

As an open and extensible platform, Tufin Orchestration Suite empowers you to make the most of your existing technology and security investments. The Tufin API enables extending the Tufin automation features to further the realized value of best-of-breed products for security operations, incident response, vulnerability management, compliance, ticketing systems, and more. The distinct advantage in focusing on complementing our partners core competencies with Tufin provides solutions that enable IT and security to consistently operate better together.

A policy-centric platform is the ideal choice to tightly integrate with solutions that can share data and ensure that the intent of the enterprise security policy is met and carried across the whole infrastructure regardless of the complexity and vendor-diversity of the network. Swimlane and Tufin are committed to partner with best in class products to bring the most value to our mutual customers.

Solution: Tufin SecureTrack and Swimlane

The combination of Tufin's SecureTrack together with Swimlane's Security Orchestration, Automation and Response (Soar) capabilities provides faster, more accurate incident response processes.

Tufin's realtime visibility into network policy delivers critical context to security analysts directly within Swimlane. This allows Swimlane to more accurately automate the response process to network threats at machine speeds. In the event that automated response isn't viable, Tufin delivers analysts the network policy detail required to understand the threat and respond quickly, directly within Swimlane.

Advanced attacks are more sophisticated than ever, evolving rapidly to bypass your security infrastructure. And while organizations have deployed a broad range of security tools to defend against advanced attacks, the sheer volume of alarms they generate overwhelm SecOps teams with a constant barrage of potential threats. Compounding this risk is a growing shortage of trained security personnel required to keep up with the volume of threats targeting your network.

Swimlane helps organizations get the most out of existing resources by automating time-intensive, manual processes and operational workflows in real-time. An API-first architecture, extensive out-of-the-box integrations and prepackaged templates allow organizations to quickly enable orchestration across their entire security infrastructure.

Tufin Orchestration Suite is an integral component to an organization's network defense strategy. To minimize risk the platform enables the effective design and deployment of network segmentation, aggregates and enriches policy data, operationalizes security policy to establish compliance baselines. Tufin designs new access changes that align with policy and minimize introduced risk, and provisions changes across network devices within minutes. The ability to immediately provision changes across network devices enables a rapid response during cybersecurity attacks.

Partner: Swimlane

Partner Product: Swimlane 3.0

Swimlane Product Benefits:

- Accelerate and streamline incident response
- Automate processes and workflows
- Centralize alarm, event and response data
- Dynamic, flexible and fully integrated case management
- Intuitive and easily customizable dashboards and visualizations
- API-first architecture with extensive out-of-the-box orchestration
- Easy to implement, configure, and maintain
- Enterprise scalability with full HA/DR and granular multitenancy
- Provide opportunities to widen solution footprint across organizations.

How it Works

The diagram below demonstrates how the Tufin and Swimlane work together with other 3rd party vendors to provide faster and more accurate network defense.

The Tufin-Swimlane integration fulfills many use cases for expediting the incident response process. By delivering accurate and up-to-date policy information via integration with Swimlane, Tufin allows companies to automatically execute incident response playbooks and respond to network threats based on accurate, concrete policy data. When automated response is not viable, the integration empowers security analysts to make accurate, rapid assessments by accessing Tufin's critical event context from directly within the Swimlane case management console.

Benefits

The combined Tufin Orchestration Suite and Swimlane's SOAR solution:

- Deliver critical Tufin policy data to security analysts directly within Swimlane's case management console
- Execute automated playbooks based on accurate and up-to-date network policy data
- Automatically update policies within Tufin in response to specific threats
- Respond to network threats faster through automated incident response playbooks

About Swimlane

Swimlane was founded to deliver innovative and practical security solutions to organizations struggling with alert fatigue, vendor proliferation and chronic staffing shortages. Swimlane is at the forefront of the growing market for security automation and orchestration solutions that automate and organize security processes in repeatable ways to get the most out of available resources and accelerate incident response.

About Tufin

Tufin® is the leader in Network Security Policy Orchestration, serving more than half of the top 50 companies in the Forbes Global 2000. Tufin simplifies management of some of the largest, most complex networks in the world, consisting of thousands of firewall and network devices and emerging hybrid cloud infrastructures. Enterprises select the award-winning Tufin Orchestration Suite™ to increase agility in the face of ever-changing business demands while maintaining a robust security posture. Tufin reduces the attack surface and meets the need for greater visibility into secure and reliable application connectivity. Its network security automation enables enterprises to implement changes in minutes with proactive risk analysis and continuous policy compliance. Tufin serves over 2,000 customers spanning all industries and geographies; its products and technologies are patent-protected in the U.S. and other countries.
