

FROM CHAOS TO CONTROL

The Reality

Modern networks are mosaics of on-prem firewalls, multicloud, SASE and micro-segmentation. Each with their own console, rules, and workflows.

Complexity. Fragmented visibility. Slow changes.

39% of IT and security leaders say their organizations are losing control of their IT and security environment due to rising complexity.

Symptoms You Are Probably Feeling

- Console sprawl
- Fragmented policies
- Policy drift & redundancy
- Limited visibility
- Audit overload
- Growing exposure

The Ripple Effect

- Slower deployments and longer maintenance windows
- Longer investigations; alert fatigue rises
- Missed SLAs; outage MTR increases
- Failed or last-minute audits; higher regulatory risk

The Answer: Tufin's Unified Control Plane for Modern Networks

A centralized management layer spanning firewalls, cloud, SASE, and segmentation that:

Unifies visibility across every enforcement point

Normalizes and orchestrates policy end-to-end

Automates change with pre-/post-validation

Enables continuous compliance with audit-ready evidence
